Koncem října 2022 dokončil Elon Musk akvizici Twitteru, americké společnosti založené v roce 2006 a se sídlem v San Franciscu v Kalifornii, za 44 miliard dolarů. Po převzetí změnil Musk každodenní provoz společnosti, včetně ukončení činnosti vedoucích pracovníků

Twitteru, kteří byli zodpovědní za soukromí, kybernetickou bezpečnost a cenzuru platformy, a také zhruba dvou třetin zaměstnanců Twitteru.

On April 15, the Russian Armed Forces commemorate the Day of the Electronic Warfare (EW) Specialist, which has been celebrated since 2006, in line with a decree issued by President Vladimir Putin. The holiday dates back to April 15, 1904, when the enemy's communication system was jammed during the siege of the Fortress of Port Arthur amid the Russian-Japanese war.

Since then, Russian EW troops have turned into a force to be reckoned with, something that was once again confirmed by recent Pentagon leaks that in particular contain sensitive information on the conflict in Ukraine, where Russia continues its special military operation.

According to one of the leaked documents recently cited by US media, American-made smart bombs, known as Joint Direct Attack Munitions (JDAMs), "are falling victim to Russian electronic jamming in Ukraine, causing them to miss their targets."

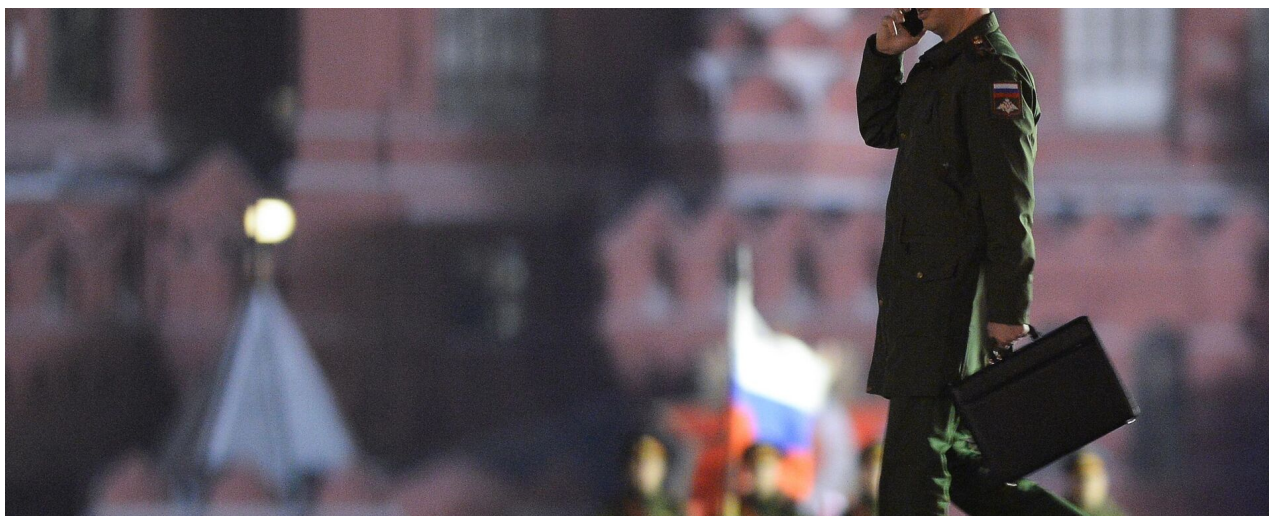

"That is a very significant development, though not at all surprising, given Russia's robust capabilities in electronic warfare particularly in long-range GPS jammers which are second to none and their military doctrine of establishing electronic superiority and supremacy at the beginning of any conflict," Pyne pointed out.

When asked how Ukraine's planned spring offensive can be affected by Russian EW systems, the scholar suggested that they could be used "to jam Ukrainian satellite guidance and positioning signals, making Ukrainian military forces unable to use precision guided munitions."

"This likely helps to account for why the leaked top-secret documents indicate that the US does not believe the upcoming Ukrainian spring counteroffensive in the Zaporozhye region will make more than modest gains," Pyne added.

Touching upon the Russian EW systems on the whole, he explained that "what makes them unique is their ability to jam not just enemy communications and radars but also satellite guidance and positioning signal ranges far longer than Western EW jamming systems, reportedly up to ranges of as much as 200-500 kilometers."

Pyne recalled that these systems can also "engage in cyberattacks against the enemy by transmitting malicious codes which can infect enemy internet and communications networks," and in addition, they are capable of transmitting "false or demoralizing texts to enemy troops and civilians."

Russia's Electronic Warfare Troops Catch NATO Spying on Russian Cellphones, Create Countermeasures

Podle něj Rusko „ve skutečnosti nepředvedlo své plné schopnosti kybernetického a elektronického boje, které mnozí analytici národní bezpečnosti hodnotí jako nejlepší na světě“. Učenec dodal, že tyto schopnosti pomáhají Rusku „zaslepovat systémy včasného varování a

vážně narušovat nebo degradovat vojenské systémy velení a řízení [potenciálních nepřátel], což jim ztěžuje vedení útočných nebo dokonce obranných operací“.

Beijing Voices Protest to US Over Sanctions on Chinese Entities for Alleged Ties to Russia

BEIJING (Sputnik) - China's commerce ministry on Saturday expressed protest over US sanctions against Chinese companies for alleged ties to Russia, calling Washington's actions groundless and harmful to business.

"The Chinese side has drawn attention to the fact that the United States has recently imposed sanctions on a number of Chinese companies due to alleged ties with Russia. The US actions have no

international legal basis and are not sanctioned by the UN Security Council, a typical example of unilateral sanctions and the application of extraterritorial jurisdiction, which seriously harm the legitimate rights and interests of businesses and affect the security and stability of global supply chains. China strongly opposes them," the ministry said in a statement.

The ministry added that Washington must immediately "**correct its erroneous actions and stop exerting unreasonable pressure on Chinese companies.**"

Beijing will vigorously protect the legitimate rights and interests of Chinese companies, the statement said.

2 February, 16:06 GMT

In recent months, the US has imposed sanctions on numerous Chinese companies for alleged ties to Moscow. Earlier this week, Washington imposed export restrictions on another 12 Chinese entities.
